one day seminar

Electromagnetics in Power Systems Applications

Wednesday, 18 June 2008

at

Areva T & D Technology Centre

Co-sponsored by Areva T & D Technology Centre

As the demands on our power systems become more exacting, there is an increasing need for the electromagnetic equipment associated with power generation, such as alternators, breakers, transformers, converters and arresters; to deliver better efficiency, to react faster and smarter when providing protection, to withstand increasing levels of fault tolerance and all the while still provide a good quality, reliable supply.

This seminar programme is intended to explore the cutting edge of Power System Application technology today. It will provide an insight into the issues driving research in a Power System environment that is moving further away from the traditional stability of an intransigent grid and becoming ever more diverse and fundamentally weaker.
